We hope this message finds you well. Congratulations on making it to the final stage of the bootcamp! We know it has been a challenging journey for some, while others have found it to be a smooth sailing experience. Regardless of the obstacles faced, we appreciate you taking this journey with us and hope that you have found the bootcamp to be a valuable learning experience.

As we approached the end of the bootcamp, we wanted to share some instructions for the final project. This project will be the culmination of all the skills you have learned throughout the bootcamp, and we are excited to see what you will create.

Thank you for your dedication and hard work during the bootcamp. We look forward to seeing your final projects.

Instructions
Below are instructions for the final bootcamp project.

Open the link to the Google Drive provide below:
https://drive.google.com/drive/folders/1ozDOipu4xGRLvkHZCCqUW-W7UzwQjcS1?usp=sharing

1. The folder contains 10 projects to select from. Please select a project you would like to mimic or imitate using HTML, CSS and Javascript.
2. Each folder contains subfolders, namely: **design**, **images** and other files including the **index.html** file as a starting point.
3. The **images** folder contains all the assets or images you will need for the website.
4. Open the **design** folder to view the final outlook or output of the website.
   a. The designs contain both mobile and web view for responsiveness but we require you to focus only on the **web view** designs.
5. Open the **index.html** file using your text editor to get started with your website.
6. **The website you are creating must exactly look like the one you selected on the designs.**
7. Add other pages and make sure to maintain the same consistency in terms of the theme and branding of the website(optional).
8. After completing the website design, make sure to host it using Firebase or any other hosting service of your choice.
9. **Lastly,**

a. **All text must be kept in Javascript variables.**
b. **Do not forget to push to github.**
